Task: Product Ordering Dashboard:
Build a responsive web app for a packaging design company where designers upload product mockups and clients place/view orders. Use MERN stack with MongoDB for data persistence.

Frontend (React):

- Responsive dashboard using React Router, Tailwind CSS or Material-UI.
- Pages: Login/Register, Designer Dashboard (upload mockups), Features: Image upload preview, order form with quantity/pricing, real-time order status updates via API polling.

Backend (Node/Express/MongoDB):

- REST APIs: User auth (JWT), CRUD for mockups (with Multer for file uploads), orders (link to mockups).
- Models: User (role: designer/client), Mockup (image URL, designer ID), Order (client ID, mockup ID, status).

Must-Haves:

- JWT authentication with protected routes.
- Image upload to public folder or Cloudinary (free tier).
- Basic validation (e.g., Zod on frontend, Express-validator backend).
- Deploy to Vercel (frontend) + Render/Heroku (backend).

Navigation Points:

- /login, /register, /dashboard (role-based), /mockups, /orders.

Submission Details:

- GitHub repo with README (setup instructions, API docs via Postman collection).
- Live demo links. Video walkthrough (2-5 min) showing full flow.
